

project for safer internet usage

# Information

empowers young people to succeed

in school

at work

in their everyday life

# But information technologies

also constitutes a formidable barrier

for young people

with

fewer opportunities

# The virtual world of the internet is full of dangers just like the real world ...

identity theft

unprotected personal data

chat-room conversations

leading to criminal actions

# Our project

aims to offer a chance for disadvantaged young people to

gain knowledge about  
the safe use of the  
internet

by the means of non-formal  
learning

During the 9 months long project  
30 disadvantaged young people are going to meet

to obtain basic  
information techniques  
to create traditional and  
online products...

...to create a community through learning

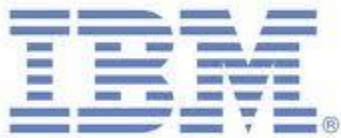

Our methods are based  
on non-formal and experience-based learning

to comply with the needs  
of young people  
and to be flexible enough to adapt  
the agenda according to their  
feedback

# The joint resources of our partners and supporters

allows us to consider this  
project as the first step

in our long journey to create  
a community place for  
every young people in the  
heart of Budapest

Thank you  
for your attention!
